The authors wish to thank the following individuals for their assistance in collecting the permit data presented in this report: Glen Skinner, LENOWISCO Planning District Commission; Sally Morgan, Mount Rogers Planning District Commission; Helen Smithers, FIFTH Planning District Commission; William Vaughn, Central Shenandoah Planning District Commission; Gordon Jones, Rappahannock-Rapidan Planning District Commission; Mathew Montavon, Central Virginia Planning District Commission; Robert Dowd, West Piedmont Planning District Commission; Gail Moody, Southside Planning District Commission; Jeff Huber, Northern Neck Planning District Commission; Joe Vinsh, Crater Planning District Commission; Claudia Benjamin Gooch, Southeastern Virginia Planning District Commission; C. Earl Hillard, Page County Building Official; Neville H. Derflinger, Jr., Warren County Building Official.

HOUSING UNITS AUTHORIZED IN VIRGINIA'S COUNTIES and CITIES:

ANNUAL 1986

INTRODUCTION

Building activity is one of the most frequently used indicators of economic and demographic change. At present, the number of housing units authorized by local building permits is the best measure of housing starts available. The information contained in this report is supplied by local building officials to the Construction Division of the U.S. Bureau of the Census. The Bureau, in turn, forwards the data to the Center for Public Service where they are tabulated and compiled.

In this release the number of residential building permits issued for housing units in Virginia counties, cities, and planning districts for 1986 is presented in Table 1. Table 2 presents data on permits issued for nonresidential construction during the year. Readers should carefully note that, unlike the data in Table 1, permits tabulated in Table 2 are for buildings, rather than for units. Tabular categories used in Table 2 include the following:

Amusement and Recreational buildings -

Includes theaters, radio and television studios, auditoriums, arenas, bowling alleys, skating rinks, indoor swimming pools, and gymnasiums.

Church, Hospital, and School buildings -

Includes churches, synagogues, rectories, Sunday school rooms, monasteries; general, TB, and mental hospitals and sanatoriums, health centers, clinics, rest homes, orphanages, homes for the aged, and nursing homes; penitentiaries, jails, reformatories; schools, colleges, seminaries, libraries, museums, observatories, and dormitories.

Industrial buildings -

Includes plants producing, processing, and assembling goods and materials, plus affiliated buildings such as warehouses and administration buildings.

Parking Garages -

Includes garage buildings and open-deck parking structures. This category does not include parking lots or residential garages and carports.

Service Stations and Repair Garages -

Includes automobile repair shops.

Office, Bank, and Professional buildings -

Includes buildings designed for doctors' offices and related services, chambers of commerce, public administration buildings such as post offices, city halls, court houses, and Federal offices.

Public Work and Utilities buildings -

Includes plants providing public services, such as transportation, communication, power, light, heat, water supply, sewage and garbage disposal, and trash incineration.

Stores and Mercantile buildings -

Includes buildings used in buying, selling, distributing, and storing merchandise and materials, or performing consumer services.

Other Nonresidential buildings -

Includes boathouses, burial crypts, farm buildings such as barns and silos, pumphouses, as well as government owned buildings such as armories, military barracks, police and fire stations, and convention centers.

This report analyzes and integrates current housing authorization reports, including data presented in previous editions covering the period from 1970 to the present. It is hoped that the analysis presented here will be useful to the reader both to give some idea of the trends in building activity since 1970, and also to acquaint the user with the nature of the data and of its possible interpretations.

The reader should bear in mind that the cost figures reported here are estimated construction costs submitted by the builders. They are not reported cost-at-completion of the units, nor do they include land cost or profit margin for the builder. In addition, the Census Bureau estimates that, nationwide, underestimation of costs runs from about 17.5 percent for single units, to about 30 percent for 2 and 3-4 unit structures, to more than 50 percent for 5+ unit structures. Average cost per unit data, therefore, cannot be taken as an estimate of the price of housing to the consumer. Despite these limitations, construction costs constitute a large proportion of the total market cost of housing, and thus the reported figures provide an important means of comparison among localities and for one area--such as the state--over time.

The reporting of the number of units authorized for construction is more reliable than the data for costs. The Census Bureau considers their estimates of housing authorizations in Virginia to be accurate to within plus or minus one percent.

MAJOR FINDINGS

☛ The population of Virginia increased 8.2 percent between April 1, 1980 and July 1, 1986, from 5,346,818 to 5,787,000.

☛ Between April 1, 1980 and December 31, 1986, permits for 400,501 housing units (including mobile homes) were issued. This represents an increase of 19.8 percent over the 2,020,941 units counted in the 1980 decennial census. See Figures 1 and 3.

☛ Since 1970 the cost of constructing a single family dwelling has increased by 256 percent, from $16,050 to $57,113. Since the first quarter of 1980 construction costs have increased by 54.8 percent. See Figures 2 and 4.

☛ As shown in Chart A the value of housing constructed in the Commonwealth during 1986 was about $3.8 billion, an increase of 24.9 percent compared to 1985. In constant dollars the increase was 22.3 percent.

☛ As shown in Chart B the value of nonresidential construction in the Commonwealth during 1986 was about $1.86 billion, an increase of 30.1 percent compared to 1985. In constant dollars the increase was 28 percent.

STATEWIDE RESIDENTIAL TRENDS

During 1986 84,044 permits were issued in Virginia, 14.7 percent more than during 1985, and about 50 percent above the 1981-1985 average of 56,177 permits per year. In fact, this level of building activity represents the highest single year total recorded since 1970, when the Center first began to tabulate building permits. The previous yearly high was 81,666 permits, recorded in 1972 at the height of the 1971–1973 housing boom. Average cost data for 1986 indicate a relatively large increase over 1985, 8.9 percent, from $41,217 to $44,868. This is only slightly less than the 9.3 percent increase recorded between 1984 and 1985.

The number of permits issued for single family units, which make up the majority of all permits, increased 17.6 percent between 1985 and 1986, from 46,011 to 54,100 units. The number of single family unit permits issued during 1986 was well above the 1981-1985 average of 46,662 units per year. Average cost data for 1986 show a substantial increase over the 1985 average, increasing 7.3 percent, from $53,244 to $57,113 per unit.

Data on the distribution of permits by type of structure show an interesting change from prior years (see Figure 5). From 1976 through 1982 permits for single family units made up a decreasing proportion of the total number of permits issued, declining from 73.3 percent of all permits in 1976 to 59.8 percent in 1982. At the same time permits for mobile homes were an increasing proportion of all permits issued, rising from 12.8 percent in 1976 to 22.4 percent in 1982. In 1983, the first year of the current housing expansion, the proportion of single family permits issued jumped to 68.1 percent (from 59.8 percent in the preceding year), while the proportion of mobile home permits declined from 22.4 percent to 15.5 percent. This pattern of opposite movements of single family and mobile home permits suggests that the two housing types are substitutes for one another, and that when purchases of new single family homes increase, sales of mobile homes decline. When new single family homes become expensive (through either high unit costs or high mortgage lending rates), mobile home sales increase.

In 1984 this historic pattern ended as the proportion of both single family and mobile homes declined from their 1983 levels. On the other hand, the number of permits issued for structures containing five or more units per structure increased dramatically, from 12.3 percent of all permits issued in 1983 to 20.1 percent in 1984. The increase in the proportion of units of this structural type reversed a six year trend that saw an overall decline in the importance of large apartment complexes.

In 1986 the proportion of single family unit permits was slightly higher than in 1985 (64.4 versus 62.8 percent), while the proportion of large apartment complexes decreased slightly from its level of last year, to 20.1 percent from 20.9 percent. Mobile homes continued to decline as a proportion of all building permits, falling to 13 percent from 14.2 percent in 1985.

A significant proportion of all residential building permits issued in 1986 were concentrated in three areas of the state--Northern Virginia, Richmond, and the Tidewater. Nearly 21,800 permits, 25.9 percent of the state total, were issued in the Northern Virginia Planning District (PD). The Richmond Regional PD issued 10,313 permits, 12.3 percent of the state total. In the Tidewater area the Southeastern Virginia PD and the Peninsula PD issued 16,309 and 7,229 permits, respectively, or 19.4 percent and 8.6 percent of the state total. In the aggregate these four planning districts accounted for two-thirds of all permits issued during 1986, 70 percent of the total value of all permits, and nearly three-quarters of all single family unit permits and their value.

STATEWIDE NONRESIDENTIAL TRENDS

Residential permit activity is often taken as indicative of the attractiveness of a locality to individuals and families. The statistics presented in this report on nonresidential building activity may be interpreted in much the same way, with the difference that the "attraction" is towards the business community. There is, quite naturally, a significant degree of overlap between the location of residential and nonresidential building activity, with population converging around business locations, and businesses decentralizing to move closer to consumers and the labor force.

During 1986 10,698 permits for nonresidential buildings were issued, an increase of 6.5 percent over the 10,049 permits issued during 1985. The dollar volume of the 1986 permits was 1.86 billion, an increase of 30 percent over last year. If both the 1985 and 1986 figures are adjusted for inflation, the 1986 figure still represents a considerable increase over 1985, of roughly 28 percent (see Chart B).

In analyzing nonresidential construction it is important to distinguish between the number of permits issued in a particular building category and the dollar value for that same category. For example, a majority of building permits are issued in the "other" nonresidential building category, which includes such structures as barns, silos, pump houses, and certain types of government owned buildings. In 1986 nearly two-thirds (62.3 percent) of all permits issued were in this category, but the aggregate value of these permits equaled only 4.1 percent of the state total. By way of contrast, the category "office, bank, and professional buildings" accounted for less than ten percent of the total number of permits issued, but their aggregate value was nearly 46 percent of the state total.

Based on dollar volume, office, banks, and professional buildings rank first at $857 million, an increase of 43.8 percent over their 1985 value. This category is followed by stores and mercantile buildings at $420.6 million (up 16 percent over 1985) and industrial buildings at $274.2 million (up 42.6 percent from 1985). The category of church, hospital, and school buildings ranks fourth, with permits valued at $147.4 million, up 45.4 percent over their 1985 value. None of the other nonresidential building categories accounted for as much as five percent of total state value.

Nonresidential construction is highly concentrated in specific areas of the state. By value, nearly 46 percent of the state total is located in the Northern Virginia PD, and another 14.1 percent in the Southeastern Virginia PD. The Richmond Regional PD contributed 7.3 percent of the state total, and the Peninsula PD accounted for 9.5 percent. Combined, these four planning districts account for 76.7 percent of the total value of nonresidential construction in the state, and for nearly half of the total number of permits issued.

In summary, 1986 was an excellent year for the housing industry in Virginia. The total value (in constant dollars) of residential permits issued reached a new high, of $3.4 billion, and the value of nonresidential building permits exceeded one billion dollars for the fourth year in succession. The 84,044 residential permits issued during the year marks an historic high, exceeding the levels reached during the housing expansions of 1971–73 and 1977–78.

Finally, it was noted that both residential and nonresidential building activity is highly concentrated in three areas of the state. Northern Virginia, the Richmond area, and the Tidewater account for between two-thirds and three-fourths of all construction activity, measured in terms of either the number of permits issued or the value of those same permits.

Housing Units Authorized in Virginia's Counties and Cities:

1st and 2nd Quarters, 1987

Michael A. Spar
Julia H. Martin

Center for Public Service
University of Virginia

February 1988

FOREWORD

The Center for Public Service is pleased to present the latest report in its series, *Housing Units Authorized in Virginia's Counties and Cities*.

Produced at the Center's Demographics Section, this series began in 1970 as an annual report. In 1976 the series was made quarterly. Reports in the series now appear three times a year, with two issues covering quarterly activity and an annual summary. In addition to data for counties and independent cities, *Housing Units Authorized* gives totals for each of the state's twenty-two planning districts.

The Demographics Section wishes to thank the following individuals for their assistance in collecting the permit data presented in this report: Glen Skinner, LENOWISCO Planning District Commission; Sally Morgan, Mount Rogers Planning District Commission; Helen Smithers, FIFTH Planning District Commission; William Vaughn, Central Shenandoah Planning District Commission; Gordon Jones, Rappahannock-Rapidan Planning District Commission; Mathew Montavon, Central Virginia Planning District Commission; Robert Dowd, West Piedmont Planning District Commission; Gail Moody, Southside Planning District Commission; Jeff Huber, Northern Neck Planning District Commission; Joe Vinsh, Crater Planning District Commission; Claudia Benjamin Gooch, Southeastern Virginia Planning District Commission; C. Earl Hillard, Page County Building Official; Neville H. Derflinger, Jr., Warren County Building Official.

We hope readers will find this report to be a useful source of information on building activity in the state, and we will be pleased to answer questions about the data.

James A. (Dolph) Norton
Director, Center for Public Service

HOUSING UNITS AUTHORIZED IN VIRGINIA'S COUNTIES AND CITIES: 1ST AND 2ND QUARTERS, 1987

INTRODUCTION

Building activity is one of the most frequently used indicators of economic and demographic change. At present, the number of housing units authorized by local building permits is the best measure of housing starts available. The information contained in this report is supplied by local building officials to the Construction Division of the U.S. Bureau of the Census. The Bureau, in turn, forwards the data to the Center for Public Service where they are tabulated and compiled.

In this release the number of residential building permits issued for housing units in Virginia counties, cities, and planning districts for January–March 1987 is detailed in Table 3 and for April–June in Table 4. The data in this series include the number of permits issued by structure type, the aggregate value of these permits, the number and cost of mobile home permits, and the number of demolitions recorded in each locality.

Readers should note that we are continuing the policy of not publishing data imputed by the Census Bureau. Localities that did not file the appropriate number of monthly reports are identified by footnotes in both tables. Also, some jurisdictions make annual rather than monthly reports. These localities are also noted in both tables. In January 1987 the Census Bureau stopped collecting information on mobile homes, which explains why most localities appear to have issued no mobile home permits. The Center for Public Service continues to collect mobile home data for some localities, but readers are warned that these data are suspect, since it has recently come to our attention that many localities do not distinguish between mobile homes that are relocating within the locality, and new mobile homes.

This report analyzes and integrates current housing authorization reports, including data presented in previous editions covering the period from 1970 to the present. It is hoped that the analysis presented here will be useful to the reader both to give some idea of the trends in building activity since 1970, and also to acquaint the user with the nature of the data and of its possible interpretations.

The reader should bear in mind that the cost figures reported here are estimated construction costs submitted by the builders. They are not reported cost-at-completion of the units, nor do they include land cost or profit margin for the builder. In addition, the Census Bureau estimates that, nationwide, underestimation of costs runs from about 17.5 percent for single units, to about 30 percent for 2 and 3-4 unit structures, to more than 50 percent for 5+ unit structures. Average cost per unit data, therefore, cannot be taken as an estimate of the price of housing to the consumer. Despite these limitations, construction costs constitute a large proportion of the total market cost of housing, and thus the reported figures provide an important means of comparison among localities and for one area over time. Data on the number of permits issued are considerably more reliable than the data for costs. The Census Bureau considers their estimates of housing authorizations in Virginia to be accurate to within plus or minus 1 percent.

MAJOR FINDINGS

- The population of Virginia increased 10.4 percent between April 1, 1980 and July 1, 1987, from 5,346,818 to 5,904,000.
- Between April 1, 1980 and June 30, 1987, permits for 434,872 housing units (including mobile homes) were issued. This represents an increase of 21.5 percent over the 2,020,941 units counted in the 1980 decennial census. See Figures 1 and 3.
- Since 1970 the cost of constructing a single family dwelling has increased by 313 percent, from $16,050 to $66,273. Since the first quarter of 1980 construction costs have increased by 79.6 percent. See Figures 2 and 4.
- As shown in Table 1 the value of housing constructed in the Commonwealth during 1986 was about $3.8 billion, an increase of 24.9 percent compared to 1985. In constant dollars the increase was 22.3 percent.
- As shown in Table 2 the value of nonresidential construction in the Commonwealth during 1986 was about $1.86 billion, an increase of 30.1 percent compared to 1985. In constant dollars the increase was 28 percent.

FIRST QUARTER TRENDS

During the first quarter of 1987 15,656 housing units were authorized for construction in Virginia. This level of building activity represents a 25 percent increase over the previous five first quarters (from 1982 to 1986) when an average of 12,500 permits were issued each quarter. Despite this above average performance, permit activity during 1987:1 was down by nearly 11 percent compared to the same period a year ago, and is also down (by 15 percent) from the previous quarter. The value of permits issued during 1987:1 was $781.4 million, compared to $780.8 million during 1986:1. A total of 9,499 single family housing unit permits were issued in the first quarter, an increase of nearly 10 percent over the five year average of 8,650 units per quarter. Compared to the same quarter a year ago, however, 18.5 percent fewer permits were issued, and compared to the last quarter (1986:4), 18.3 percent fewer permits were issued.

Building trends in Virginia usually mirror national trends, and this was clearly the case for all units, but not single family units. Total units issued, for example, declined 15 percent in Virginia, and 9 percent in the U.S. between 1986:4 and 1987:1. Comparing 1986:1 and 1987:1, there was an 11 percent reduction statewide, and a 7.5 percent reduction nationally. For single family units, however, Virginia and the U.S. moved in opposite directions during the quarter. For the U.S., 1987:1 marked a slight increase over 1986:4 (about 1 percent), and an 8 percent increase compared to 1986:1. In Virginia the number of single family unit permits fell 18.3 percent since the last quarter, and declined by 18.5 percent over the same quarter a year ago.

Construction costs, which had only increased slowly from quarter to quarter during 1986 (up 2.3 percent from the first through the fourth quarter) rose sharply from 1986:4 to 1987:1. For all units the increase was 9.5 percent, while for single family units the increase was 5.5 percent.

A significant proportion of all building permits issued in the Commonwealth were concentrated in three areas of the state—Northern Virginia, Richmond, and the Tidewater. Permits for 5,344 units, 34.1 percent of the state total, were issued in the Northern Virginia Planning District (PD). The Richmond Regional PD issued 1,912 permits, equal to 12.2 percent of the state total. In the Tidewater area Southeastern Virginia PD accounted for 2,309 permits, or 14.7 percent of the state total. The Peninsula PD issued 1,427 permits, for 9.1 percent of the state total. Together these three areas accounted for 70 percent of all permits issued statewide, and for 71 percent of the total value of all permits issued.

SECOND QUARTER TRENDS

During the second quarter 18,715 housing units were authorized for construction in Virginia. This level of building activity represents only a 2 percent increase over the previous five second quarters when an average of 18,350 permits were issued in each quarter. Building activity during 1987:2 was substantially less than during the same quarter a year ago (down by 28.3 percent), although it was higher than the previous quarter (up by 19.5 percent). The value of permits issued during 1987:2 was $1,019.5 million, compared to $1,162.0 million during 1986:2, a decrease of 12.3 percent. A total of 12,945 single family housing unit permits were issued in the second quarter, an increase of 7.4 percent over the five year average of 12,050 units per quarter. Compared to the same quarter a year ago, 1987:2 represents a decrease of 26 percent in the number of single family unit permits issued. There was, however, an increase in the number of single family unit permits issued between 1987:1 and 1987:2, up 36 percent.

Building activity in Virginia during the second quarter closely paralleled the national pattern. Between 1987:1 and 1987:2 the number of single family unit permits increased 36 percent in Virginia and 34 percent in the U.S., while the total number of permits issued increased 19.5 percent in the state, and 28 percent in the nation. Comparing 1986:2 and 1987:2, the number of single family unit permits issued declined 6 percent in the U.S. and 26 percent in Virginia, while the total number of permits issued declined 14 percent in the U.S. and 28 percent in Virginia.

Per unit construction costs had increased sharply for both single family units and all unit types during the first quarter. In the second quarter per unit construction costs continued to increase rapidly from their first quarter levels. For all unit types combined the increase was 9.2 percent, from $49,909 during the first quarter to $54,477 during the second. For single family units the increase was less, 4.8 percent.

As was true in the first quarter, building permit activity was heavily concentrated in three areas of the state —Northern Virginia, Richmond, and the Tidewater. The Northern Virginia PD issued 6,529 permits during the second quarter, equal to 35 percent of the state total. The Richmond Regional PD issued 2,948 permits, for 16 percent of the state total. In the Tidewater region the Southeastern Virginia and Peninsula PDs issued 2,609 and 1,177 permits, respectively, equal to 14 and 6 percent of the total number of permits issued. These four planning districts accounted for about 71 percent of total building activity in the Commonwealth.

VIRGINIA PLANNING DISTRICTS 26

FOREWORD

The Center for Public Service is pleased to present the latest report in its series, *Housing Units Authorized in Virginia's Counties and Cities.*

Produced by the Center's Demographic Section, this series began in 1970 as an annual report. In 1976 the series was made quarterly. Reports in the series now appear three times a year, with two issues covering quarterly activity and an annual summary. In addition to data for counties and independent cities, *Housing Units Authorized* presents totals for each of the state's twenty-two planning districts.

The Demographic Section wishes to thank the following individuals for their assistance in collecting the permit data presented in this report: Glen Skinner, LENOWISCO Planning District Commission; Sally Morgan, Mount Rogers Planning District Commission; Helen Smithers, Fifth Planning District Commission; William Vaughn, Central Shenandoah Planning District Commission; Gordon Jones, Rappahannock–Rapidan Planning District Commission; Mathew Montavon, Central Virginia Planning District Commission; Robert Dowd, West Piedmont Planning District Commission; Gail Moody, Southside Planning District Commission; Jeff Huber, Northern Neck Planning District Commission; Joe Vinsh, Crater Planning District Commission; Claudia Benjamin Gooch, Southeastern Virginia Planning District Commission; C. Earl Hillard, Page County Building Official; Neville H. Derflinger, Jr., Warren County Building Official.

Several staff members at the Center for Public Service assisted the authors in preparing this study. George E. Barnes and Sandra H. Wiley edited the report. Barry A. Jackson designed the layout.

We hope readers will find this report to be a useful source of information on building activity in the state, and we will be pleased to answer questions about the data.

James A. (Dolph) Norton

SUMMARY

In the third quarter of 1987, 17,812 new housing units were authorized for construction in Virginia, a figure 7 percent higher than the average for this quarter during the past five years. In the fourth quarter, with 14,478 new units authorized, building activity fell 11 percent compared to the average fourth quarter. The third-quarter results in Virginia were better than results in the nation as a whole, but the sharp fourth-quarter decline in the state paralleled the national trend.

Between the last census count of housing (April 1, 1980) and the end of 1987, permits for 467,162 housing units (including mobile homes) were issued in Virginia. This represents an increase of 23 percent over the 2,020,941 units counted in the 1980 census.

In both the third and fourth quarters Fairfax County led the state in construction activity, issuing about three times as many permits as the next closest locality. The five leading planning districts in number of permits issued during both quarters were Northern Virginia, Southeastern Virginia, Richmond Regional, Peninsula, and RADCO. These five districts combined accounted for about three-fourths of all permits issued in the state.

The average cost of a single-family dwelling in Virginia increased from $66,273 in the second quarter to $66,318 in the third, or less than one percent. In the fourth quarter, however, the average cost jumped 8.3 percent, from $66,318 to $71,794. Since the first quarter of 1980 construction costs for single-family units have increased by 95 percent in current dollars and by 46 percent in constant dollars (adjusted for inflation). Since 1970 the cost of constructing a single-family dwelling has increased 347 percent in current dollars.

During 1986 (the last year for which complete data are available) the value of residential housing constructed in Virginia was about $3.8 billion, and the value of nonresidential construction was about $1.9 billion.

Construction of single-family units accounts for the majority of building activity in most localities. In a few cities, however, construction of multi-family units predominates. In the fourth quarter, for example, multi-family units accounted for more than half of all permits issued in Alexandria, Chesapeake, Harrisonburg, Newport News, Norfolk, Portsmouth, Roanoke, and Suffolk.

ANALYSIS

Introduction

Building activity is one of the most frequently used indicators of economic and demographic change. Presently, the number of housing units authorized by local building permits is the best available measure of housing starts for Virginia's counties and independent cities. Most of the information contained in this report is supplied by local building officials to the Construction Division of the U.S. Bureau of the Census. The Bureau, in turn, forwards the data to the Center for Public Service where they are tabulated and compiled. For about forty of the state's smallest localities building permit statistics are collected by the planning districts directly from local building officials, and then forwarded to the Center for tabulation.

This report presents the number of residential building permits issued for housing units in Virginia counties, independent cities, and planning districts for July–September 1987 (Table 3) and for October–December 1987 (Table 4). The data in this series include the number of permits issued by structure type, the aggregate value of these permits, the number of demolitions recorded in each locality, and the net increase in the housing stock. Data on construction costs in Table 1 and Table 2 are compiled only through 1986; the figures for 1987 will be available in the next report in this series (Annual, 1987).

We are continuing the policy of not publishing data imputed by the Census Bureau. Localities that did not file a complete set of monthly reports are identified by footnotes in both tables. Localities that make annual rather than monthly reports are also noted in the tables.

In January 1987 the Census Bureau stopped collecting information on mobile homes; this is why most localities are listed as having issued no mobile home permits. The Center for Public Service continues to collect mobile home data for some localities, but these data should be interpreted cautiously, since it has recently come to our attention that many localities do not distinguish between new mobile homes and mobile homes that are relocating within the locality.

The cost figures reported here are estimated construction costs submitted by the builders and often exclude land acquisition costs or the builders' profit margin. Additionally, the Census Bureau estimates that nationwide underestimation of costs on construction itself runs from about 17.5 percent for single units, to about 30 percent for structures of two to four units, to more than 50 percent for structures of five or more units. The figures for average cost per unit, therefore, do not represent an estimate of the price of housing to the consumer. Despite these limitations, construction costs constitute a large proportion of the total market cost of housing, and thus the reported figures provide an important means of comparison among localities and for one area over time.

Data on the number of permits issued are considerably more reliable than the data for costs. The Census Bureau considers its estimates of housing authorizations in Virginia to be accurate to within plus or minus 1 percent.

This report analyzes and integrates current housing authorization reports with data presented in previous editions covering the period from 1970

to the present. The analysis presented here should be useful to the reader to highlight trends in building activity.

Third-Quarter Trends

During the third quarter, 17,812 housing units were authorized for construction in Virginia. This level of building activity represents a 7 percent increase over the previous five third quarters, from 1982 to 1986, when an average of 16,600 permits were issued quarterly. Figures 1 and 3 show the historic trend in permit activity on an annual and quarterly basis.

Despite this above-average performance, permit activity during the quarter was down 1 percent compared to the same quarter a year ago. Permit activity was also down—by 5 percent—from the previous quarter. Normally, however, there is a 10 percent seasonal decrease between the second and third quarters, so this 5 percent decline is actually a strong showing.

Permits for 11,901 single-family housing units were issued during the quarter, an increase of nearly 16 percent over the five-year average of 10,300 units per quarter. Compared to the same three months a year ago, 6 percent more such permits were issued. Compared to the second quarter of this year, 8 percent fewer permits were issued, but this is a much better performance than

TABLE 2.
Aggregate Nonresidential Construction Costs, Virginia: 1980–1986

Year	Value of Construction in Current Dollars (in Millions $)	Boeckh Index for Commercial Buildings	Deflated Value of Construction in Constant 1982 Dollars (in Millions $)
1980	664.9	84.1	790.6
1981	781.6	92.2	847.7
1982	790.4	100.0	790.4
1983	1,013.6	105.3	962.6
1984	1,242.8	109.4	1,136.0
1985	1,425.5	111.3	1,280.8
1986	1,855.1	113.2	1,638.8

SOURCES: Boeckh Index from U.S. Department of Commerce, *Construction Review* 32 (March–April 1987), Table E–1; annual data from previous editions of *Housing Units Authorized*.

NOTES: The Boeckh Index is an independent index of construction costs compiled by The American Appraisal Company, Inc. Deflated value = current value x (100 / index value).

the normal seasonal decline of around 15 percent between the second and third quarters.

The total value of all permits issued during the third quarter was $942.6 million, 14.5 percent higher than the $823.2 million issued during the same quarter a year ago. The total value of single-family unit permits was $789.3 million, compared to $691.2 million a year ago, an increase of 14.2 percent.

Building trends in Virginia usually mirror national trends, but this was not the case in the third quarter. Between the second and third quarters of 1987, the number of permits issued for total units declined 10 percent in the U.S. but only 5 percent in Virginia. Between the third quarter of 1986 and the third quarter of 1987, there was a 12 percent reduction nationally, but only a 1 percent reduction statewide. For single-family units, Virginia and the U.S. moved in opposite directions in one important measure. For the U.S., single-family unit permits issued during the third quarter decreased 14 percent compared to the preceding quarter and decreased 6 percent compared to the same quarter a year ago. In Virginia the number of these permits fell 8 percent since the last quarter, but *increased* 6 percent over the same quarter a year ago.

Third-quarter construction costs per unit rose slightly for single-family units, but showed a moderate decline for all unit types combined (single-family units, mobile homes, and multi-unit structures). The average cost of a single-family unit increased from $66,273 in the second quarter to $66,318 in the third, a rise of less than 1 percent. For all unit types, average cost declined from $54,477 to $52,919, a drop of nearly 3 percent. Figures 2 and 4 show the historic trend in permit costs on a per-unit basis.

A significant proportion of all building permits issued in the Commonwealth was concentrated in just five of the state's twenty-two planning districts (PDs). The Northern Virginia PD, which includes Fairfax County and other localities near Washington, D.C., led the state with 6,885 permits issued, equal to nearly 40 percent of all permits issued statewide. The Southeastern Virginia PD, which includes Virginia Beach City and surrounding jurisdictions, ranked second with 2,294 permits issued—12.9 percent of the state total. The Richmond Regional PD, which includes Richmond City and its surrounding suburban localities, issued 2,211 permits, or 12.4 percent of the state total. Peninsula PD, which includes the cities of Hampton and Newport News, was in fourth place with 1,087 permits, about 6 percent of

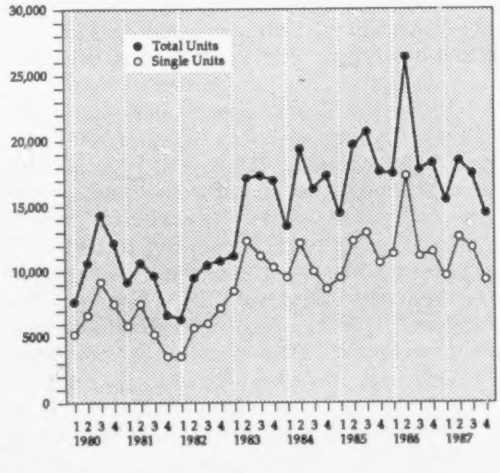

FIGURE 4.
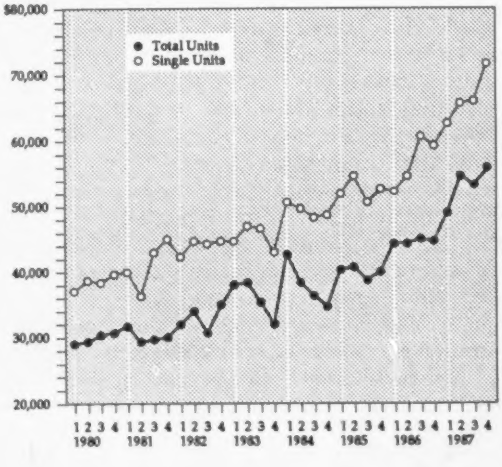
Average Value of Permits Per Unit, 1980:1–1987:4



the state total. The last planning district to issue as many as five percent of the state total is RADCO, which includes the area around Fredericksburg City. RADCO issued 957 permits. Combined, these five PDs accounted for 13,400 permits, about three-fourths of all permits issued in Virginia.

Fourth-Quarter Trends

During the fourth quarter 14,478 housing units were authorized for construction in the state. This level of building activity represents an 11 percent decrease over the previous five fourth quarters, when an average of 16,300 permits were issued quarterly. Building activity during the quarter was substantially less than during the same quarter a year ago (down by nearly 22 percent); it was also significantly lower than the previous quarter, (down by 19 percent). The normal seasonal change between the third and fourth quarters is a small decline of less than 2 percent.

Permits for 9,477 single-family housing units were issued in the fourth quarter, a decrease of 3.3 percent from the five-year average of 9,800 units per quarter. Compared to the same quarter a year ago there was a decrease of 18 percent in the number of single-family unit permits issued. The number of such permits decreased between the third and fourth quarters of this year by one-fifth, a sharper drop than the normal seasonal decline of 5 percent.

The value of all permits issued during the fourth quarter was $808.9 million, compared to $841.7 million during the fourth quarter of 1986, a decrease of nearly 4 percent. The total value of all single-family unit permits was $680.4 million, compared to $696.1 million in the same quarter a year ago, a decrease of 2.3 percent.

Building activity in Virginia during the fourth quarter closely paralleled the national pattern. Between the third and fourth quarters permits for single-family units decreased 20 percent in Virginia and 22 percent in the U.S. The total number of permits issued decreased 19 percent in the state, and 21 percent in the nation. Comparing 1986 and 1987 fourth quarters, the number of single-family unit permits issued declined 9 percent in the U.S. and 18 percent in Virginia, while the total number of permits issued declined 17 percent nationally and 22 percent in Virginia.

During the fourth quarter, per-unit construction costs increased rapidly from their third-quarter levels. For all unit types combined, the increase was 5.6 percent, from $52,919 to $55,873 per unit. For single-family units the increase was 8.3 percent, from $66,318 to $71,794.

The concentration of new housing units in the Commonwealth shows the same geographic pattern as was seen in the third quarter, although the rank of some of the planning districts changed. The Northern Virginia PD again ranked first, issuing 5,006 residential building permits, or about 35 percent of the state total. The Southeastern Virginia PD ranked second, issuing 2,494 permits—17 percent of the total. Third highest in both quarters was the Richmond Regional PD, with nearly 14 percent of all permits issued statewide, about 2,000. In fourth position was RADCO, which issued 929 permits, 6.4 percent of the state total. The Peninsula PD, which issued 731 permits, was fifth with exactly 5 percent of the state total. Together these five planning districts accounted for 77 percent of all permits issued in Virginia.

VIRGINIA PLANNING DISTRICTS 36

FOREWORD

The Center for Public Service is pleased to present the latest report in its series, *Housing Units Authorized in Virginia's Counties and Cities.*

Produced by the Center's Demographic Section, this series began in 1970 as an annual report. In 1976 the series was made quarterly. Reports in the series now appear three times a year, with two issues covering quarterly activity and an annual summary. In addition to data for counties and independent cities, *Housing Units Authorized* presents totals for each of the state's twenty-two planning districts.

The Demographic Section wishes to thank the following individuals for their assistance in collecting the permit data presented in this report: Glen Skinner, LENOWISCO Planning District Commission; Sally Morgan, Mount Rogers Planning District Commission; Helen Smithers, FIFTH Planning District Commission; William Vaughn, Central Shenandoah Planning District Commission; Gordon Jones, Rappahannock-Rapidan Planning District Commission; Mathew Montavon, Central Virginia Planning District Commission; Robert Dowd, West Piedmont Planning District Commission; Gail Moody, Southside Planning District Commission; Jeff Huber, Northern Neck Planning District Commission; Joe Vinsh, Crater Planning District Commission; Claudia Benjamin Gooch, Southeastern Virginia Planning District Commission; C. Earl Hillard, Page County Building Official; Neville H. Derflinger, Jr., Warren County Building Official.

Several staff members at the Center for Public Service assisted the authors in preparing this study. George E. Barnes and Sandra H. Wiley edited the report. Barry A. Jackson designed the layout.

We hope readers will find this report to be a useful source of information on building activity in the state, and we will be pleased to answer questions about the data.

James A. (Dolph) Norton
Director, Center for Public Service

SUMMARY

Virginia's construction industry performed at above-average rates during 1987, although not at the same high level reached in 1986. During 1987 permits for nearly 69,000 residential housing units were issued statewide, about 5 percent above the 1982-86 average. About 46,000 permits for single-family units were issued, nearly 10 percent above the five-year average.

The total value of all residential permits issued was $3.7 billion in current dollars, or $3.2 billion in constant 1982 dollars. This is the second-highest total recorded since 1970, when we began analyzing housing trends; only 1986 produced a higher total.

Residential construction was concentrated in five of the state's twenty-two planning districts: Northern Virginia, Southeastern Virginia, Richmond Regional, Peninsula, and RADCO. These five planning districts combined issued over 50,000 permits, about three-fourths of the state total.

Eleven localities issued over 1,000 residential building permits during the year, led by Fairfax County with 8,557. Chesterfield County, Prince William County, Virginia Beach City, and Henrico County each issued over 2,000 permits. On the other hand, only four localities issued over 1,000 permits for residential units in multi-unit structures. These were Fairfax County, Prince William County, Norfolk City, and Alexandria City.

Nonresidential construction set new records during 1987. The total of 10,903 permits issued was the highest number recorded since 1980, as was the aggregate value of these permits—$1.98 billion dollars.

Four categories of building types accounted for the majority of all nonresidential construction. Permits issued for offices, banks, and professional buildings had an aggregate value of nearly $1 billion; permits for stores and mercantile buildings were worth over $500 million; church, hospital, and school construction was worth $170 million; and permits issued for industrial buildings were valued at about $140 million.

The geographic concentration of nonresidential construction was even more pronounced than for residential construction. Three planning districts, Northern Virginia, Southeastern Virginia, and Richmond Regional, accounted for over 70 percent of the total state value of all nonresidential construction.

Fairfax County led the state in the construction of new office, bank, and professional buildings, issuing permits valued at $500 million. Another fifteen localities issued permits valued at $5 million or more. In the category of new stores and mercantile buildings, twenty-one localities issued permits worth over $5 million. Fairfax County led the state, issuing permits valued at over $200 million, followed by Virginia Beach City at $38 million.

Only five jurisdictions issued permits valued at $5 million or more for new church, hospital, or school buildings. Winchester City led the state in this category, issuing permits valued at $55 million. Six localities issued over $5 million worth of permits for industrial buildings, led by Rockingham County at $22 million.

ANALYSIS

Introduction

Building activity is one of the most frequently used indicators of economic and demographic change. Presently, the number of housing units authorized by local building permits is the best measure of housing starts available for Virginia's counties and independent cities. Most of the information contained in this report is supplied by local building officials to the Construction Division of the U.S. Bureau of the Census. The Bureau, in turn, forwards the data to the Center for Public Service where they are tabulated and compiled. For about forty of the state's smallest localities building permit statistics are collected by the planning district directly from local building officials, and then forwarded to the Center for tabulation.

In this report, tables 1 and 2 give annual totals for the value of residential and nonresidential construction in the state. The number of residential building permits issued for housing units in Virginia counties, cities, and planning districts for 1987 is presented in Table 3. Table 4 presents data on permits issued for nonresidential construction during the year. Readers should carefully note that, unlike the data in Table 3, the permit totals in Table 4 are for buildings, rather than for units. Tables 5 and 6 provide historical data for the period from 1980 to 1986.

The nonresidential building categories in Table 4 include the following:

- **Amusement and recreational buildings** include theaters, radio and television studios, auditoriums, arenas, bowling alleys, skating rinks, indoor swimming pools, and gymnasiums.
- **Church, hospital, and school buildings** include churches, synagogues, rectories, Sunday school rooms, monasteries; general, TB, and mental hospitals and sanatoriums, health centers, clinics, rest homes, orphanages, homes for the aged, and nursing homes; penitentiaries, jails, reformatories; schools, colleges, seminaries, libraries, museums, observatories, and dormitories.
- **Industrial buildings** include plants producing, processing, and assembling goods and materials, plus affiliated buildings such as warehouses and administration buildings.
- **Parking garages** include garage buildings and open-deck parking structures. This category does not include parking lots or residential garages and carports.
- **Service stations and repair garages** include automobile repair shops.
- **Office, bank, and professional buildings** include buildings designed for doctors' offices and related services, chambers of commerce, public administration buildings such as post offices, city halls, court houses, and federal offices.
- **Public work and utilities buildings** include plants providing public services, such as transportation, communication, power,

TABLE 1.

light, heat, water supply, sewage and garbage disposal, and trash incineration.

- **Stores and mercantile buildings**
  include buildings used in buying, selling, distributing, and storing merchandise and materials, or performing consumer services.

- **Other nonresidential buildings**
  include boathouses, burial crypts, farm buildings such as barns and silos, pumphouses, as well as government-owned buildings such as armories, military barracks, police and fire stations, and convention centers.

We are continuing the policy of not publishing data imputed by the Census Bureau. Localities that did not file a complete set of monthly reports are identified by footnotes in tables 3 and 4. In January 1987 the Census Bureau stopped collecting information on mobile homes; this is why most localities are listed as having issued no mobile home permits. The Center for Public Service continues to collect mobile home data for some localities, but these data should be interpreted cautiously, since it has come to our attention that many localities do not distinguish between new mobile homes and mobile homes that are relocating within the locality.

The cost figures reported here are estimated construction costs submitted by the builders and often exclude land acquisition costs or the builders' profit margin. Additionally, the Census Bureau estimates that nationwide underestimation of costs on construction itself (i.e., materials and

1986	1,855.1	113.2	1,638.8
1987	1,976.6	115.1	1,717.3

SOURCES: Boeckh Index from U.S. Department of Commerce, *Construction Review* 33 (March–April 1988), Table E–1; annual data from previous editions of *Housing Units Authorized.*

NOTES: The Boeckh Index is an independent index of construction costs compiled by The American Appraisal Company, Inc. Deflated value = current value x (100 / index value).

labor) runs from about 17.5 percent for single units, to about 30 percent for structures of two to four units, to more than 50 percent for structures of five or more units. The figures for average cost per unit, therefore, do not represent an estimate of the price of housing to the consumer. Despite these limitations, construction costs constitute a large proportion of the total market cost of housing, and thus the reported figures provide an important means of comparison among localities and for one area over time.

Data on the number of permits issued are considerably more reliable than the data for costs. The Census Bureau considers its estimates of housing authorizations in Virginia to be accurate to within plus or minus 1 percent.

Statewide Residential Trends

During 1987, 68,842 residential building permits were issued in Virginia, about 19 percent fewer than during 1986 (a record year), but about 5 percent above the 1982-1986 average of 65,471 permits per year (see Figure 1). Part of this decline can be attributed to the absence of mobile home data this year, as explained in the introduction. If mobile home permits are removed from both the 1986 and 1987 counts, the annual decline is reduced by nearly half—from 18.9 percent to 9.5 percent.

The aggregate value of all residential units issued during 1987 was $3.7 billion in current dollars, the third consecutive year exceeding the $3 billion mark, and the second-highest yearly total since we began tabulating permit data in 1970 (see Table 1). The 1987 total of $3.7 billion converts to about $3.2 billion in constant 1982 dollars, just under the previous year's record total of $3.4 billion. Average costs per unit rose sharply during 1987, increasing by 18.5 percent over 1986, from $44,868 to $53,170 (see Figure 2).

The number of permits issued for single family units, which make up the majority of all permits, decreased 15.6 percent between 1986 and 1987, from 54,100 to 45,651 units. Still, the number of single-family unit permits issued during 1987 was about 9.6 percent above the 1982-1986 average of 41,659 units per year. The average cost of a single-family unit increased substantially over 1986, rising 16.1 percent, from $57,113 to $66,297 per unit.

Virginia's construction industry fared about as well as the entire nation in issuing permits for

FIGURE 1.
Number of Permits Issued, 1970–1987

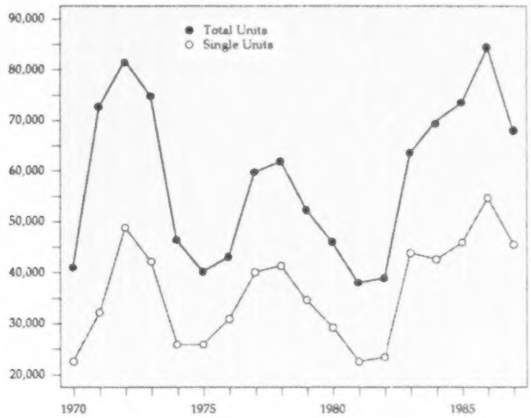

FIGURE 2.
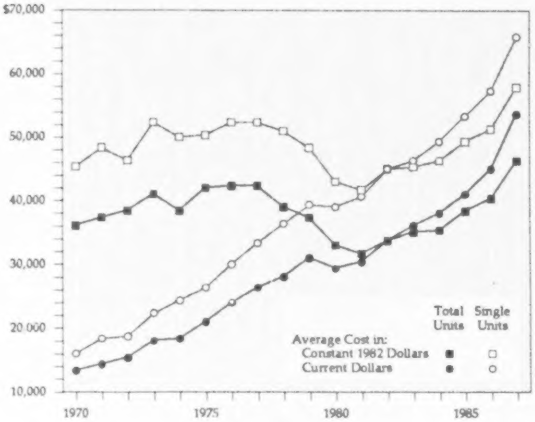
Average Value of Permits Per Unit, 1970–1987



all unit types combined. During 1987, 1.52 million permits were issued in the U.S., compared to 1.75 million in 1986, a decline of 12.9 percent. In Virginia the decline was 9.5 percent (excluding mobile home permits). For single-family units, however, the national statistics are much better than those for the Commonwealth. Nationally, single-family unit permits fell from 1.07 million in 1986 to 1.03 million in 1987, a decrease of less than 4 percent. For Virginia the decline was much greater, 15.6 percent.

A significant proportion of all building permits issued in the Commonwealth was concentrated in just five of the state's twenty-two planning districts (PDs). The Northern Virginia PD, which includes Fairfax County and other localities near Washington, D.C., led the state with 23,784 permits issued, equal to nearly 35 percent of all permits issued statewide. The Southeastern Virginia PD, which includes Virginia Beach City and surrounding jurisdictions, ranked second with 9,751 permits —14.2 percent of the state total. The Richmond Regional PD, which includes Richmond City and its surrounding suburban localities, issued 9,045 permits—13.1 percent of the state total. Peninsula PD, which includes Hampton and Newport News cities, was in fourth place with 4,422 permits, about 6 percent of the state total. RADCO PD, which includes the area around Fredericksburg City, issued 3,465 permits, 5 percent of the state total. Combined, these five PDs accounted for 50,467 residential permits, about three-fourths of all permits issued in Virginia.

Eleven localities issued one thousand or more residential building permits for single-family units. Fairfax County issued the greatest number—8,557. Following Fairfax were Chesterfield County (3,337), Prince William County (2,808), Virginia Beach City (2,697), Henrico County (2,076), Chesapeake City (1,957), Spotsylvania County (1,652), Loudoun County (1,280), Hanover County (1,115), Stafford County (1,101), and Newport News City (1,088).

Only four localities issued as many as one thousand residential building permits for units is multi-unit structures. Fairfax County led the state with 4,690 permits. Prince William County ranked second with 2,277, Norfolk City was third with 1,490, and Alexandria City issued 1,398.

Statewide Nonresidential Trends

Residential permit activity is often seen as indicative of the attractiveness of a locality to individuals and families. The statistics presented in this report on nonresidential building activity may be similarly interpreted as indicating a locality's attractiveness to the business community. There is, quite naturally, a significant degree of overlap between the location of residential and nonresidential building activity, with population converging around business locations, and businesses decentralizing to move closer to consumers and the labor force.

During 1987 10,903 permits for nonresidential buildings were issued, a small increase over the 10,698 permits issued during 1986. The current dollar value of these permits was $1.98 billion, an increase of 6.5 percent over the previous year (see Table 2). In constant 1982 dollars the 1987 total is $1.72 billion, the highest recorded figure since we began tabulating nonresidential building permits in 1980.

In analyzing nonresidential construction by building type one finds large disparities between the number of permits issued in a particular category and the dollar value for that same category. For example, most building permits are issued in the "other" nonresidential building category, which includes such structures as barns, silos, pump houses, and certain types of government-owned buildings. In 1987 nearly two-thirds of all permits issued were in this category, but the aggregate value of these permits equaled only 4.1 percent of the state total. By way of contrast, the category "office, bank, and professional buildings" accounted for less than 10 percent of the total number of permits issued, but their aggregate value was 46 percent of the state total.

Based on dollar volume, office, bank, and professional buildings ranked first with an aggregate value of $910 million, an increase of 6.1 percent over their 1986 value. This category was followed by stores and mercantile buildings at $534 million, up 27 percent over 1986. In third place were church, hospital, and school buildings, at $167 million, an increase of 13.1 percent over last year. Industrial buildings ranked fourth, with permits valued at $139 million, down nearly 50 percent from their 1986 value. Figure 3 shows the number of permits issued in each of these four nonresidential building categories annually from 1980 to 1987. Figure 4 shows the aggregate value of these permits in constant dollars. None of the other nonresidential building categories accounted for as much as five percent of total state value.

Nonresidential construction is even more highly concentrated in specific areas of the state than residential construction. Tabulated by value, nearly 52 percent of the state total for 1987 was located in the Northern Virginia PD, while 14.1 percent was in the Southeastern Virginia PD. The

FIGURE 3.
Number of Nonresidential Permits Issued, by Type, 1980–1987

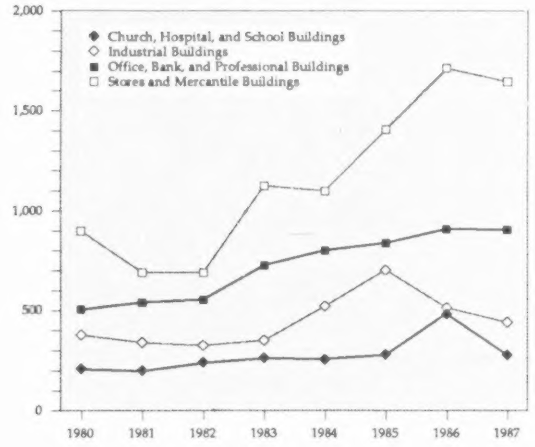


FIGURE 4.
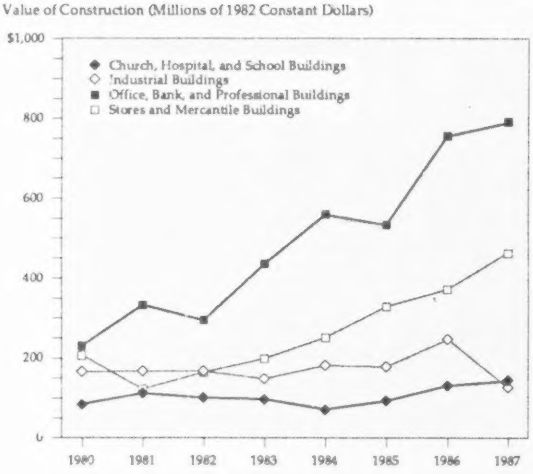
Aggregate Value of Nonresidential Permits, by Type, 1980–1987



Richmond Regional PD contributed 11.1 percent of the state total. Combined, these three planning districts accounted for 71.4 percent of the total value of nonresidential construction in the state, but for only a third of the total number of permits issued.

Sixteen localities issued permits for over $5 million of construction of new office, bank, or professional buildings. The top five localities were Fairfax County ($487 million); Arlington County ($103 million); Henrico County ($36 million); Alexandria City ($35 million); and Richmond City ($32 million). Other localities with over $5 million, listed in descending order, included Chesterfield County, Chesapeake City, Virginia Beach City, Newport News City, Prince William County, Hanover County, Fairfax City, Norfolk City, Albemarle County, Prince George County, and Fauquier County.

Twenty-one localities issued permits valued at $5 million or more in the category of stores and mercantile buildings. The top five localities were Fairfax County ($204 million); Virginia Beach City ($38 million); Chesterfield County ($26 million); Henrico County ($19 million); and Prince William County ($19 million). Other localities that issued permits valued at over $5 million, listed in descending order, included Newport News City, Suffolk City, Hampton City, Chesapeake City, Montgomery County, Roanoke City, Stafford County, Harrisonburg City, Hanover County, Portsmouth City, Spotsylvania County, Augusta County, Williamsburg City, Lynchburg City, Rockingham County, and Norfolk City.

Only five jurisdictions issued permits valued at $5 million or more in the category of church, hospital, or school buildings. These were Winchester City ($55 million), Henrico County ($10 million), Newport News City ($7 million), Alexandria City ($7 million), and Franklin County ($5 million).

Lastly, six localities issued permits valued at $5 million or more in the category of industrial buildings. In order these were Rockingham County ($22 million), Prince William County ($11 million), Chesterfield County ($8 million), Newport News City ($6 million), Pittsylvania County ($6 million), and Smyth County ($6 million).
